a first magnetic force line generating portion positioned near one end portion of an outer periphery of the discharge electrode; and a second magnetic force line generating portion positioned near the other end portion of an outer periphery of said discharge electrode,

wherein the first and the second magnetic force line generating portions generate magnetic force lines having portions roughly parallel to the center axis of the discharge electrode, such that the length of the parallel portions becomes longer the closer the magnetic force lines are to the center axis, the magnetic force lines being capable of trapping electrons at least in a center of the plasma generation region.
